Subject: Update for the residential sampling in Bridgeton

Hi everyone,

As we spoke earlier today, I promised to send our plans for tomorrow. I apologize for the late update.

We will be finishing up our investigation in the house we were working in today, tomorrow morning starting at about 9:00am. I estimate it will take our team about half the day to finish.

We have a small amount of work to finish up outdoors and potentially additional soil samples to collect. We have more surveying and swipe sampling activities to complete inside the house that will take most of the first half of the day to complete. Finally, we will collect bulk dust samples once the sample containers arrive from the lab (expected by about 10:00am).

Around noon, we will be moving to another house to start the outdoor portion of the investigation. Sometime later in the afternoon, we will start the indoor portion of the investigation. We will not complete our investigation of this house by tomorrow.

Right now, our plan is to complete this second house on Thursday and our activities this week will likely be concluded.

I will send any updates to this information tomorrow should anything change in our plans for Thursday.

Let me know if there are any questions.
